WOMEN IN SCIENCE WORLD

Nowadays, we can see women in every walks of life as well as men. In too many kind of faculties at universities men and women are about the same numbers in impreüing countries. However, it is hard to talk about that kind of balance when it comes to math and science. Off all reasons it can be explained by the factors of ; cultural values and lack of role models

First reason of fewer women studying mat and science is cultural values. Cultural values have been shaping the place of women in society for centuries. In growing age girls are imposed with the ideas like not being suitable for hundreds of thousands of things which one of them is science. So that, they prefer to stay away. In the past few years, it can be talked about a increase in number of women who studying science but, cultural diversity still protects it's impact

Another important reason for this situation is lack of role model. People always want an example of succes in front of them and in too many countries women scientists are very few in number. However,

there are too many scientists who are men which is very supportive for men. As women stay away from science and math to study, this ^{problem of} lack of role model will continue. We would not be exaggerating if we say that women are few in number at science studying thanks to, lack of role model.

To sum up, due to reason of cultural values and different interest, fewer women study in science and math compared to men. If society support women more, it enables seeing more women in this area.
